

Workshop: Data Analytics

Lab1 & Lab2

Lab1 — Data Cleaning with Google Colab

Objective

Complete the data cleaning exercise using the provided Google Colab notebook. By the end of this assignment, you should be able to clean, prepare, and combine raw hotel datasets for further analysis.

Tasks

- Follow the tutorial in the notebook and run each code cell in order.
- Complete all TODO sections in the notebook.

Submission

Submit the following to Google Classroom:

- The link to your completed Google Colab notebook (set sharing to **Anyone with the link can view**).
- The final cleaned dataset (`hotels.csv`) generated from the notebook.

Notes

- Ensure that all notebook cells run successfully without errors before submission.
- Your exported dataset should be named **hotels.csv**.

Lab2 — Hotel Data Dashboard

Objective

Create a **1-page interactive dashboard** in **Looker Studio** using the provided dataset **hotels.csv**.

Your dashboard should present meaningful insights that help hotel managers or travelers make better decisions. Think about what information is important and choose visualizations that effectively communicate your findings.

Requirements

- Your dashboard should:
- Include at least **4 charts**.
- Include at least **2 scorecards (KPIs)**.
- Present **4 meaningful business insights** supported by your charts.
- Use appropriate chart types and clear titles.
- (Optional) Include interactive filters such as City, Hotel Category.

Submission

- Publish or share your Looker Studio dashboard.
- Set the sharing permission to **"Anyone with the link can view."**
- Submit the dashboard link via Google Classroom.
