Hotel category breakdown

Average price by star rating

Average price per night by city

Peak season distribution

Rating vs price (scatter)

Insight 1 — Price by City

Looker Studio: Bar Chart

Key Findings

1. Phoenix leads at \$2,254/night
2. Seattle most affordable at \$1,919
3. ~\$335 gap top vs bottom --- 17%
4. Phoenix & Dallas lead unexpectedly

Looker: Dimension = city
Metric = AVG(price_per_night)

Insight 2 — Hotel Category Breakdown

Looker Studio: Pie

Overall Mix (114 hotels)

■ Luxury ■ Standard ■ Budget

Luxury

48 hotels (42%)

\$3,131

avg/night

Standard

34 hotels (30%)

\$1,135

avg/night

Budget

32 hotels (28%)

\$1,365

avg/night

Looker: Pie → Dimension = category · Metric = COUNT hotel_id

Insight 3 — Peak Season Distribution

Looker Studio: Pie Chart

Peak Season Distribution

■ Winter ■ Fall ■ Year-round ■ Spring ■ Summer

Season Insights

1. Winter is peak for 28% of hotels
2. Fall is close behind at 25%
3. Only 10% operate in Summer peak
4. Year-round hotels command a price premium
5. Spring 17% — mild weather drives leisure travel

Looker: Pie Chart → Dimension = peak_season · Metric = Record Count · Sort = metric descending

Insight 4 — Availability by City

Looker Studio: Bar Chart

Available (93 hotels)

Not available (21 hotels)

82%

available overall

18%

fully booked

Availability Insights

1. Philadelphia & Dallas: 100% available
2. Seattle, LA & San Diego: 30–33% booked
3. 82% available overall — strong market supply

Looker: Bar Chart → Dimension = city · Metric = Record Count · Breakdown Dimension = available · Style: color true = green, false = red

Insight 5 — Do Stars Predict Guest Ratings?

Looker Studio: Bar Chart

What this means

stars **strongly predict guest ratings**

2★ avg 2.9 → 5★ avg 4.7

Use stars as a quick quality filter
when searching

Looker: Bar Chart → Dimension = stars · Metric = AVG(rating) · Sort = stars ascending · Style: show data labels

How to Build This in Looker Studio

Step-by-step setup for the hotel dashboard

1

Upload to Google Sheets

File → Import hotels.csv into a new Sheet. This becomes your Looker data source.

2

Connect Data Source

Looker Studio → Create → Data Source → Google Sheets → select your file.

3

Create New Report

Add a blank report. Drag the Sheets data source in. Set date range if needed.

4

Add Charts

Insert → Chart. Choose type (Bar, Pie, Scatter, Geo). Drag fields to Dimension / Metric.

5

Add Filters & Controls

Add "Filter Control" widgets: category, city, stars, available. Charts auto-filter.

6

Share & Present

View → Share → link or PDF export. Use Presentation mode for live demo.
